
Idempotency

idempotency in services - sap - idempotency guarantees delivery of synchronous messages exactly once. this document details the why and how of this feature, as implemented in sap business suite and ce 7.1 ehp1

idempotency, output-drivenness and the faithfulness triangle inequality: some consequences of mccarthy's (2003) categoricity generalization - rutgers university - idempotency, output-drivenness, and the triangle inequality 3 general case, the f is stronger than the f is expected, given ... **types, potency, and idempotency: why nonlinearity and amnesia make a type system work - csandis** - lacks idempotency, each occurrence of a variable requires a distinct type. consequently, type inference is equivalent to normalization in every single case, and time bounds on type inference and normalization are identical. similar relationships hold for other intersection type systems without idempotency. **an introduction to idempotency - hp labs** - an introduction to idempotency jeremy gunawardena 1 introduction the word idempotency signifies the study of semirings in which the addition operation is idempotent: $a+a = a$. the best-known example is the max-plus semiring, $(\mathbb{R} \cup \{-\infty\}, \max, +)$, in which addition is defined as $\max\{a, b\}$ and multiplication as $a + b$, the latter being distributive over the former. **idempotency and projection matrices - public.iastate** - suppose $A = \begin{bmatrix} 1 & 1 \\ 1 & 1 \end{bmatrix}$: find the orthogonal projection matrix that projects onto $\text{col}(A)$. find the orthogonal projection matrix that projects onto $\text{row}(A)$. find the orthogonal projection of $x = \begin{bmatrix} 1 \\ 1 \end{bmatrix}$ onto $\text{col}(A)$. **idempotency in optimality theory - roa** - idempotency in optimality theory $a = a^1 a^1$ says that the string a is the concatenation of the segments a^1, \dots, a^1 and thus has length 1 . the paper assumes the representational framework (4). underlying and surface forms are strings of segments. **fault tolerance via idempotence - microsoft** - fault tolerance via idempotence g. ramalingam and kapil vaswani microsoft research, india grama, kapilv@microsoft abstract building distributed services and applications is challenging due **reference idempotency analysis: a framework for optimizing speculative execution - college of engineering - purdue university** - reference idempotency analysis: a framework for optimizing speculative execution seon wook kim1, chong-liang ooi1, rudolf eigenmann1, babak falsafi 2, t.njaykumar1 1school of electrical and computer engineering, purdue university 2department of electrical and computer engineering, carnegie mellon university **basic chef fluency badge topics** - basic chef fluency page 1 v1.0.2 basic chef fluency badge topics the basic chef fluency badge is awarded when someone proves that they understand the core elements that underpin chef. **hat matrix: properties and interpretation week 5, lecture 1** - the idempotency of P implies that once a vector has been projected to a subspace, it "remains" there, even if we re-apply the same projection. 1.4 symmetry of the hat matrix **on the equality between rank and trace of an idempotent matrix - u-m personal world wide web server** - the rank and trace of an idempotent matrix by using only the idempotency property, without referring to any further properties of the matrix. it is shown that such a proof can be obtained by exploiting a general property of the rank of any matrix. an original proof of this property **lecture 13: simple linear regression in matrix format** - idempotency here is that once we've projected u on to the line, projecting its image on to the same line doesn't change anything. extending this same reasoning, for any linear subspace of the n -dimensional space, there is always some $n \times n$ matrix which projects vectors in arbitrary \mathbb{R}^n from the latin idem, "same", and potens, "power". **math formulas: set identities** - idempotency 8. $A \cap A = A$ set identities involving intersection commutativity 9. $A \cap B = B \cap A$ associativity 10. $A \cap (B \cup C) = (A \cap B) \cup (A \cap C)$ idempotency 11. $A \cup A = A$ set identities involving union and intersection distributivity 1 **ab initio molecular dynamics: propagating the density matrix with gaussian orbitals. ii. generalizations based on mass-weighting, idempotency, energy conservation and choice of initial conditions - indiana university bloomington** - gaussian-basis density matrix aimd method 11 and also analyze some of its important computational properties. for completeness, in sec. ii, some of the basic concepts from ref. 11 are briefly reviewed and a new scheme to maintain idempotency of the density matrix is also provided. in sec. iii, the concepts in sec. ii are generalized to include ... **some equivalence laws of propositional logic - faculty of ict** - some equivalence laws of set operators $x \in x \equiv \neg(x \notin x)$ definition of not an element of $x \in x \cup y \equiv x \in x \vee x \in y$ from definition of union
